

COM 33400 Web Design – Week 5 Assignment MICRO PROJECT PART 2 – Due MONDAY 9/28/15

This part of the Micro Project focuses on creating a mobile re-skin of your website. Use the @media query to create a series of graphic / layout swaps that optimize the User Experience (UX) of the site. Focus on placing the 3 or 4 most important concepts in front of your user.

The following things should be developed for your mobile layout before you begin coding:

1. A wireframe layout concept
2. A set of Mobile Icons : Feel free to use resources like <http://graphicburger.com/ui-kits/>

When complete with your mobile re-skin, upload the folder into Google drive in a “week 5” sub-folder.
