COM 33400 Web Design – Week 6 Assignment – Media Design Firm Website with Bootstrap
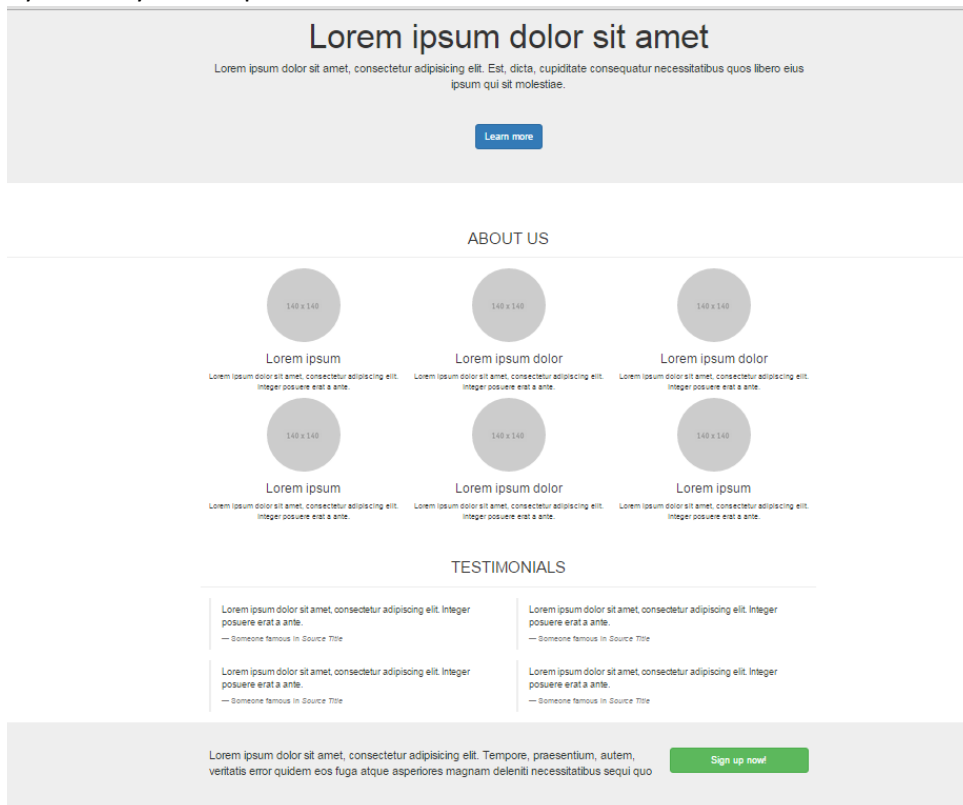

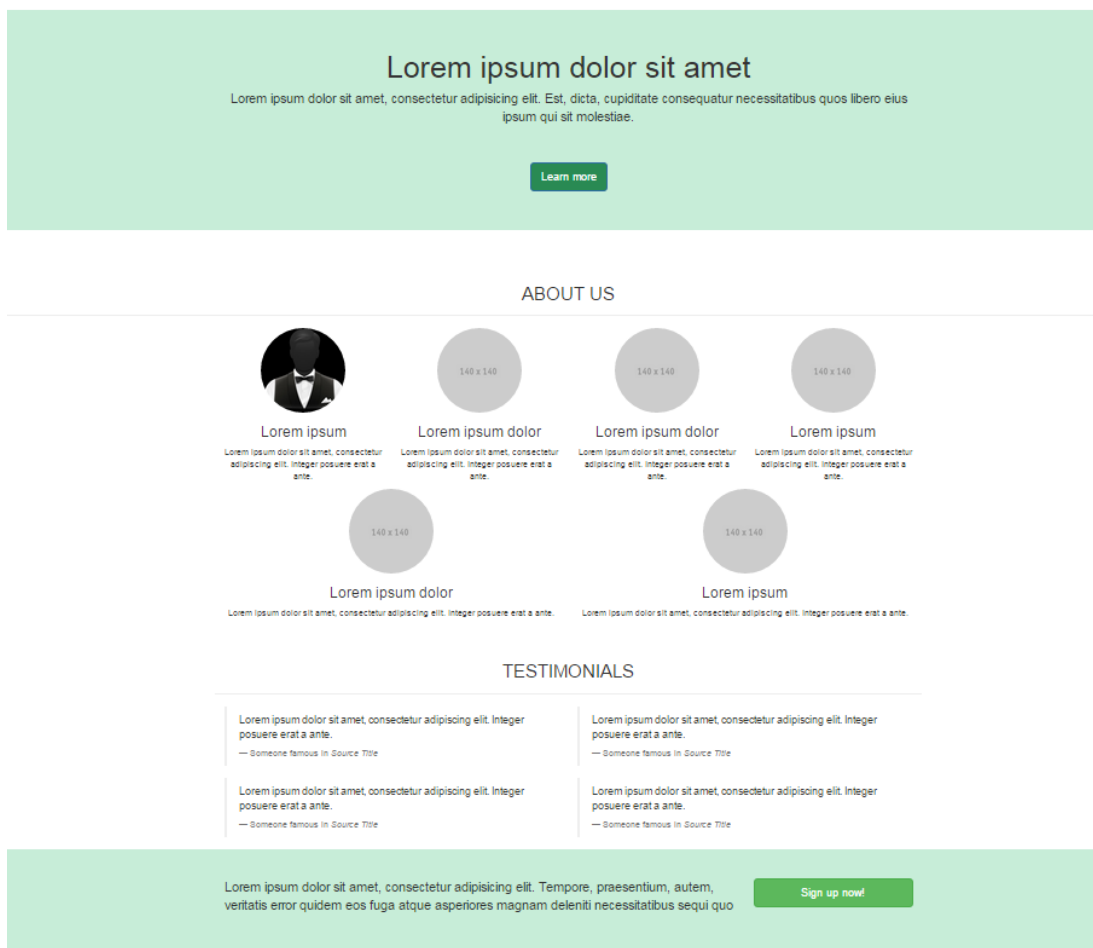

This Week's Assignment will involve working with another HTML/CSS/Java framework called Bootstrap. There are a variety of ways to set up Bootstrap, and whichever method you choose to use is fine. The simplest way is to use Adobe Dreamweaver, which is the example I'll be providing in class. Your objective is to use Bootstrap to create a Media Design Firm website.

1. Setup a Bootstrap Document in Adobe Dreamweaver.   File>New>Dreamweaver Site. Use the Bootstrap **Agency Template** for this exercise.
2. By default your template will look like the screenshot below:

3. Utilize the DOM and CSS Designer window/ your knowledge of CSS to modify the template to match the screenshot below:

4. After changing the layout, replace all image placeholders and text with images and text that will simulate a Media Design Firm's website. You need only design the home page at this point.

When complete, upload your files to both the Google Drive >Week 6 folder and to a subdomain on your Biz.nf website.
